We’re committed to helping ensure your health and safety as you travel worldwide.
We’re committed to helping ensure your health and safety as you travel worldwide.

We specialize in travel medicine and carry the vaccines not typically stocked in a primary care clinic. More importantly, we have the most up-to-date information on changing health and safety conditions in foreign countries.

Before your appointment:
• Visit www.thedacareatwork.org for frequently asked questions on travel medicine
• If possible, have ready your immunization record

To make an appointment, call ThedaCare At Work at least 4-6 weeks prior to departure. Please gather the following information and bring it with you to your appointment:
• A complete itinerary (including cities, countries being visited and activities pursued), as well as travel dates
• Immunization record
• Allergy information
• Personal medications

At the appointment:
• Complete a health history questionnaire provided by ThedaCare At Work
• Receive a personalized consultation to discuss vaccine recommendations and specific health and safety issues
• Appointments are at least an hour in length, but vary based upon your itinerary, number of people in your travel group, and number of vaccines to be administered.

If any vaccines are administered at your appointment, your immunization history will be updated in the Wisconsin Immunization Registry for future travel reference. ThedaCare At Work will provide you with a “yellow card”, or International Certificate of Vaccination if needed.

Payment is due at time of service. ThedaCare At Work Travel Medicine Clinic costs are not typically covered by group health insurance plans. Our office can provide documentation for you to submit to your health insurance provider, flexible spending accounts, or health savings accounts.
